## TOPIARY FORMS

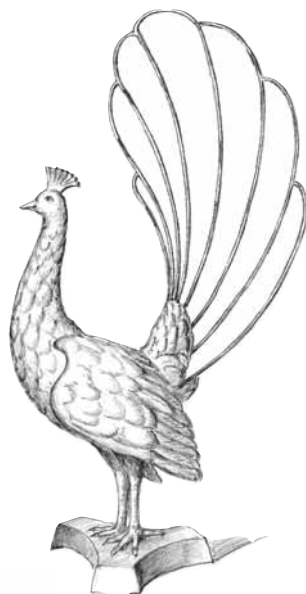

For centuries all the great gardens in Europe have had amazing exhibitions of topiary work. Bushes and closely filled trees were grown and then an expert gardner who was part sculptor would trim these into the shape of balls, pyramids, peacocks, roosters, etc. Some of these figures took generations to grow.

Here, in America, we have invented a better and faster way to enjoy the beauty of topiaries. We had to devise a way to create these topiary forms so that they could be grown quickly and the gardner could use the form as a guide for the proper shape.

The sizes shown for topiary frames are sizes that were chosen arbitrarily. The drawings are approximately to scale, and in most cases we will only give one dimension. As these are custom made, you may change the dimensions to suit your taste and location or you may design your own. Our topiaries are all handmade from heavy gauge stainless steel rods and fastened together into the shape. We will be able to quote immediately on the topiary design, if we are able to manufacture it.

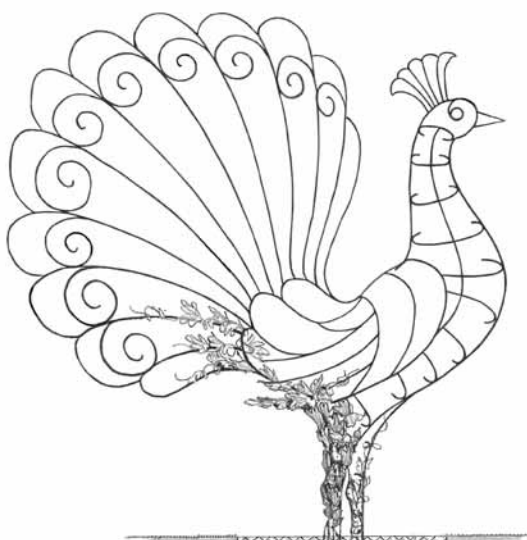

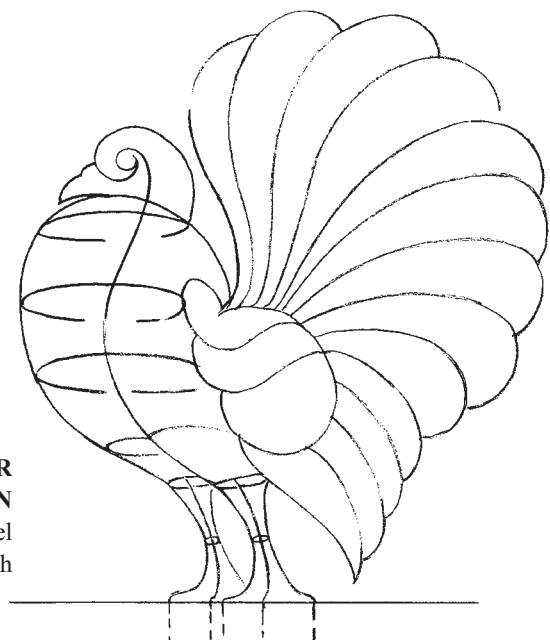

NO. 2405 ENGLISH PEACOCK

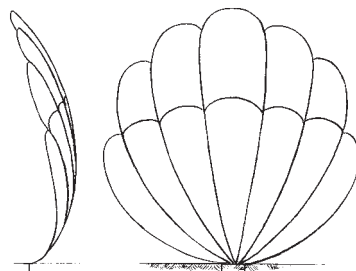

4127 TOPIARY POUTER  
PIGEON

Stainless Steel  
48" h

NO. 4161 TOPIARY PEACOCK

48" h  
No. 1344 Urn is sold separately.

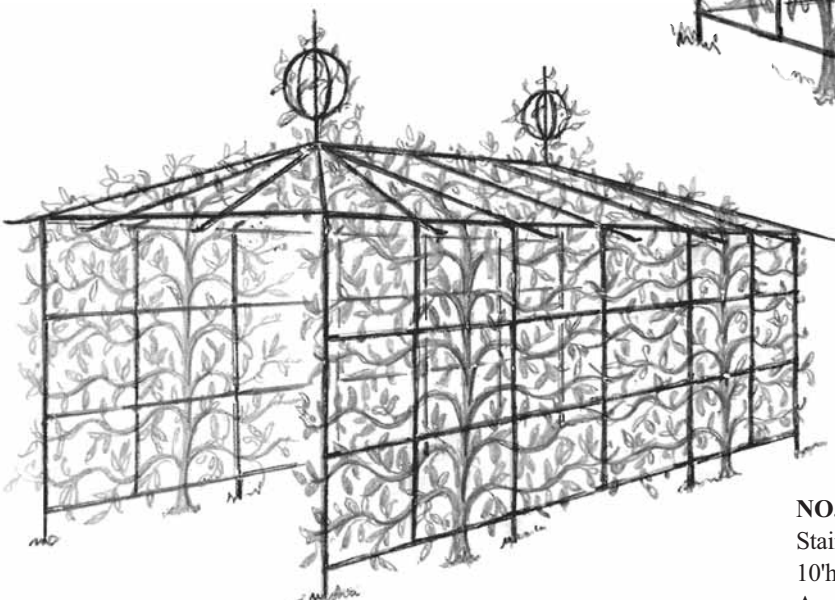

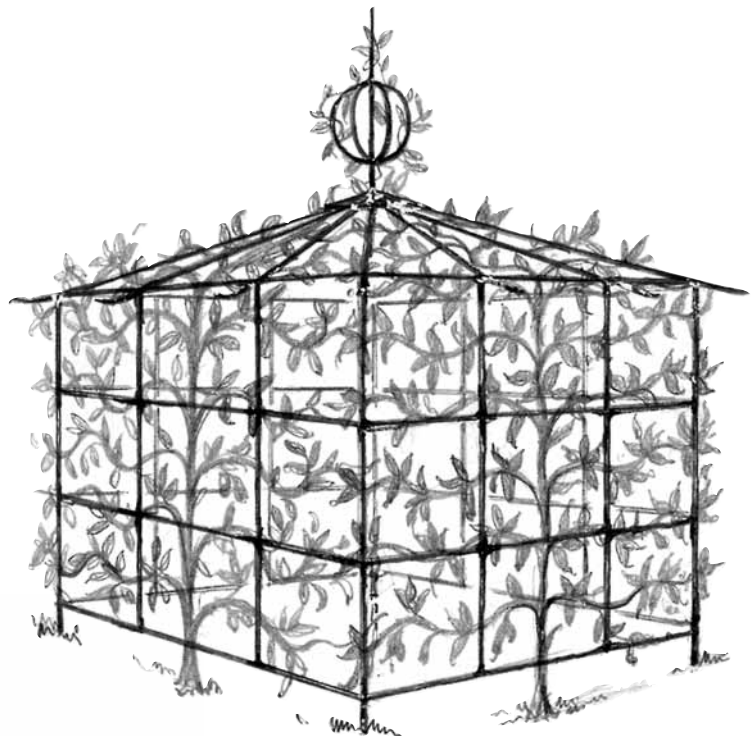

## TIPS ON ANCHORING TOPIARIES

Most smaller topiaries are made with extensions to the frame for anchoring in the ground. Sometimes these are set into masonry. Very large frames, say for an arbor or pergola, should have proper footings to prevent movement. While we are happy to help with the design of the topiary, we suggest that you employ an architect to design any footings. We are happy to work with your architect.

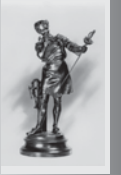

**NO. 4160 TOPIARY GAZEBO**  
Stainless Steel  
120" h (10 ft.)

**NO. 4626 TOPIARY GARDEN HOUSE**  
Stainless Steel  
10'x10'  
Bolts together. Sized to order.

**NO. 4625 TOPIARY GRAPE ARBOR**  
Stainless Steel  
10'h X 20'l  
Available in any length.

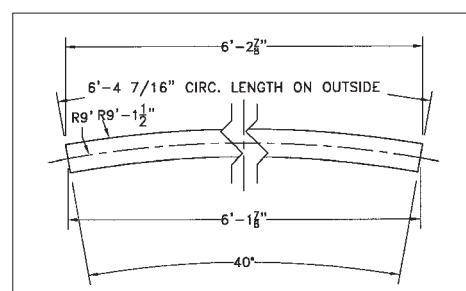

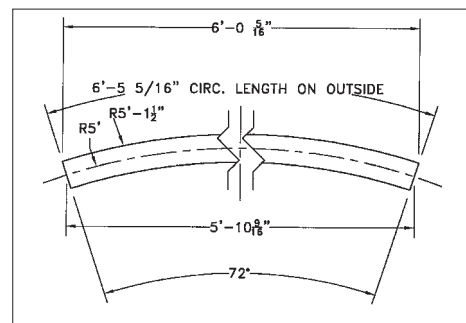

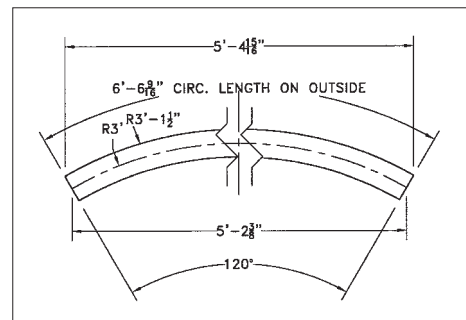

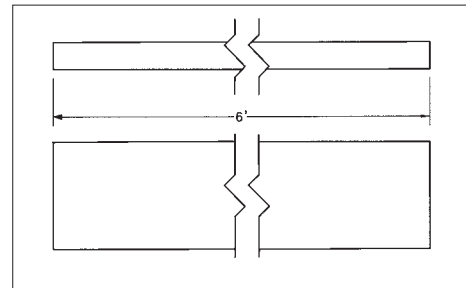

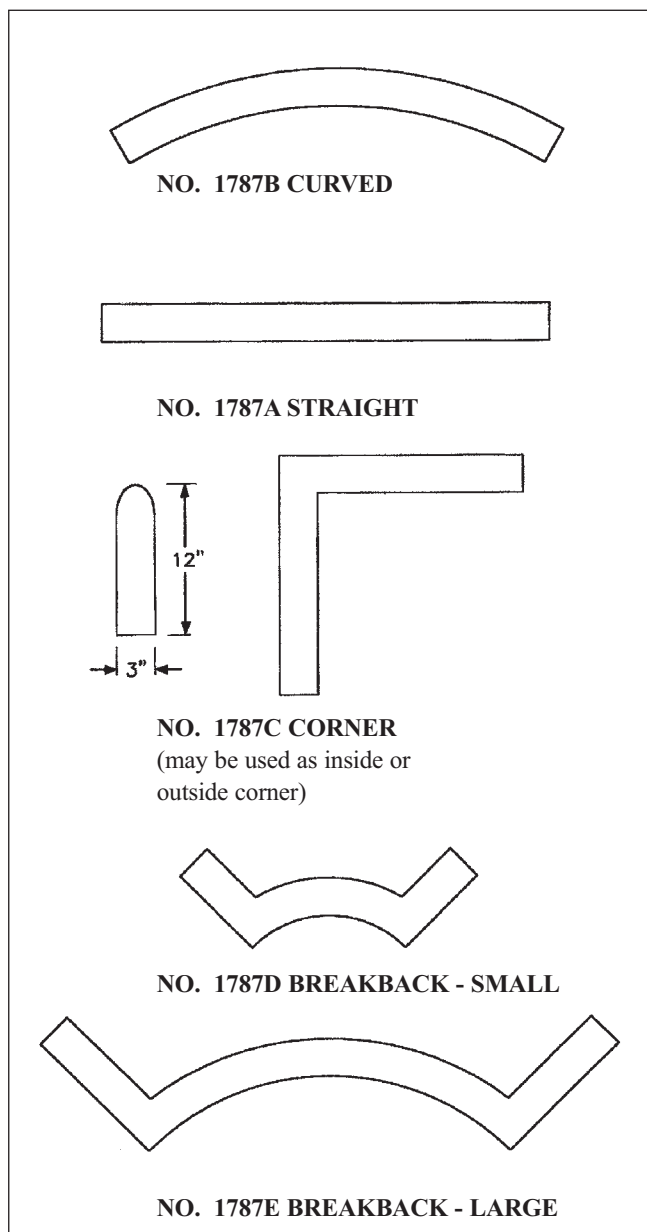

## GARDEN EDGING

There is occasionally a need for edging to separate garden from path or grass. We have seen many different offerings. Here is ours. We suggest that it can be made straight, as corners, in various radii, and in shapes such as pool curbing No. 275. We are suggesting that this edging be made 3' to 6' long, with fiberglass reinforcing, and that only full lengths be made so the installer can cut it in the field to fit the job accurately. Additionally, hose guards and other implements can be installed on this edging as needed. Pieces can be secured end to end below grade to keep them from shifting. It is intended that at a minimum 6" of this edging be buried (in the case that you might be making a step) and that, typically, 9" to 10" will be buried.
