

LYNCH URBAN SEATING

ANCHORING OPTIONS

PREPARING FOR ANCHORING

- Each 'foot' or contact point has a 5/8" hole to accept an anchor.
- Anchoring is typically achieved with 1/2" diameter wedge type anchor bolt, various lengths are available.
- The installer can utilize all contact points for anchoring or as many are suitable for the level of security required.
- When using only a portion of the contact points, we suggest opposite sides front and rear.

PLANNING THE FOOTING

Refer to our bench photos for anchor locations to prepare your footing

Select your footing style:

- Full concrete pad
- Rectangular ends only
- Individual contact points
- Concealed below pavers/ bricks/ asphalt
- Crushed stone

Placement directly in soft terrain is not suggested for the long term as the bench will sink over time.
